I've tried downloading the page with the browser but it just loads the page instead of the actual content. Is there any quick way to test changes without wasting loads of time? A: After the real website is up and running, one can view the page that is live with the standard HTML-Previewer (e.g. IE or Chrome). The Previewer allows to enter specific rules for how to handle the formatting of the page. It often includes the whole markup to quickly test the formatting and the change in content. In your case, it is not necessary to start a new website (with e.g. Drupal or similar). You can just install the standard Previewer in your desktop browser. It is of course a viable alternative to learn to use the real site from the beginning. ## Copyright:: Copyright (c) Chef Software Inc. # License:: Apache License, Version 2.0 #
